POINTS OF PERFORMANCE

Points of Performance, PoP, for a specific exercise should provide a complete picture of the exercise. To make this easy to read and easy to learn, it is based on a few general rules and a small set of pre-defined positions and body parts.

REP START  Defines how the athlete’s body and external object must be to start a valid repetition.

REP END  Defines how the athlete’s body and external object must be to end a valid repetition.

REP REQUIREMENTS  Requirements that the athlete must achieve during the repetition in order for it to be valid. This may also restrict what the body and object may do during the repetition.

CYCLE & POST REP  Requirements for body and object after a valid repetition, and before the start of a new repetition.

MEASUREMENTS  Any measurements if applicable.

VALID OBJECT/EQUIPMENT  Defines which object(s) or equipment that can be used in accordance with the specific standard.

VARIATIONS  Lists any variations if applicable. See the variation overview of points to be added to the original PoP in order to meet the variation requirements.

GENERAL RULES

ADHERE TO INTENT

While a movement’s definition is meant to be exact and complete, there might be cases where a literal interpretation of the written standard can be exploited to perform the movement in a way that was not intended. In such cases the Technical Official (TO) or Head Technical Official (HTO) will be able to no-rep such repetitions in real-time or after the test.

AVOID CONTACT

Unless specifically stated the athlete and/or object may not rest or come in contact with:

- any surface (wall, ceiling, floor)
- any equipment, bars, boxes, racks etc.
- any objects not being the active object during a repetition

The main exceptions not specified are shoes-to-floor on any ground movement and hands-to-rings/bar on any hanging movement as well as the active object’s resting position (on ground, in rack etc.).

PASSIVE ARM

Whenever there one or more passive arms, e.g. in one-arm movements or leg-movements, the passive arm(s) cannot be used to push or pull off the athlete’s body or contact it in any way unless specifically stated in the standard. The arm(s) can however be swung in air to generate momentum or kept in air.

HANG RULE

If object is in contact with the ground, including before the initial rep, a deadlift lockout must be achieved before the rep can be initiated.

ALTERNATING RULE

An alternating execution of a task implies that the repetitions of the task must be completed by alternating left/right on the active hand or foot. After a good rep by the left side, a new repetition will not be counted on the left side before a good rep has been performed on the right. If the athlete is not able to perform the movement on both sides, he or she will not be able to complete the task.
UNBROKEN RULE

A set of repetitions must be performed without breaking, resting object on ground or resting outside of the normal movement pattern. If \texttt{rep start} = \texttt{rep end}, then there are no “in between” reps and rep requirements would count for the whole set.

Some definitions in this regard:

- Breaking equals letting go of external object or dismounting from bar/rings.
- Resting on ground is anything more than a touch-and-go fraction of a second contact.
- Resting outside of normal movement pattern is going into a position that normally one would not and that is clearly done for the recovery purpose. E.g. putting the bar on the back of the neck (not front-rack) during a set of thrusters.

LINE POSITIONING

Whenever a standard requires the athlete to be in contact with the ground on one side of a line, this means that not only must the athlete be in contact with the ground as stated, but no other part of the athlete may be in contact with the actual line or the area on the other side of the line.

Parts of the athlete’s body may be above the line or on the incorrect side of the line as long as these parts are in the air and not in contact with the ground. E.g. an athlete may jump over a finish line while having his hands in the air behind the line.

WEIGHT VEST

If a weight vest is required for a task, it must be worn tight enough so that the vest can be pulled away no greater than two fingers depth from the chest. An athlete who chooses to adjust vest tightness while mid-task may be required to show the TO that the vest adjustment conforms to the above standard before continuing with further task work.

VISIBILITY AT SPEED

Unless specifically stated in the standard, all \texttt{rep start, rep end} and other positions may be achieved in speed and with momentum. Still, it is the athlete’s responsibility to perform the movement clearly for the TO.
